

## The Elements of the Integral Calculus; With Its Applications to Geometry and to the Summation of Infinite Series . (Paperback)

Filesize: 5.65 MB

### ***Reviews***

*Extensive manual! Its such a great read. It really is loaded with knowledge and wisdom You wont really feel monotony at at any time of your time (that's what catalogs are for regarding if you ask me).*

## THE ELEMENTS OF THE INTEGRAL CALCULUS; WITH ITS APPLICATIONS TO GEOMETRY AND TO THE SUMMATION OF INFINITE SERIES . (PAPERBACK)

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1831 Excerpt: .have for the area of the touching at M the expression  $\int \frac{dz}{dx} dy$  the quantity under the radical being a function of  $x$  and  $y$  we may represent it by  $f(x, y)$ , and to find the expression for the other parallelogram or that touching at C, we shall merely have to change in this  $x$  into  $x + h$  and  $y$  into  $y - j - k$ , multiplying the result as before by  $hk$ . Now  $\int \frac{+}{+} = \int \frac{+}{+} + gA + rf + c$ . consequently, the general expression for the ratio of the two parallelograms in space is which when  $h$  and  $k$  become 0 reduces to unity; hence in the limit the ratio of the intermediate surface MC to either of these parallelograms is unity, so that then  $(PS \int dx dy \frac{dx}{dy})$  becomes  $= \int dx dy \frac{dx}{dy}$  therefore As an illustrative example let us take as before a spherical surface. From its equation  $x^2 + y^2 + z^2 = r^2$ , we get by differentiating  $dz = -\frac{x}{z} dx - \frac{y}{z} dy$  and these values substituted in the foregoing expression under the radical reduces it to  $-\frac{x}{z} \sqrt{r^2 - x^2 - y^2}$  this taken as before between the limits P and M, (see fig. p. 154, ) or, TTV from  $i = u$  to  $x = \sqrt{r^2 - y^2}$  is  $-\frac{1}{2} \pi r^2$ , which is the quadrantal vertical arc subtended by PM; and multiplying by  $dy$ , and integrating again, have finally  $S = \pi r^2 y$ , which from  $y=0$  to  $y=r$ ...
